

This graphic shows that fill dirt depth at Southwest corner of house can be determined by measuring the new fence height on its south side (9'-6") and on its north side (6'-3" to the top of fill dirt) - the difference is the fill dirt depth = 3'-3". Approved plans show 6'-0" high fence and no fill on site except for a few inches directly against house. Fence height violates Zone Reg 6412. Fill dirt violates Zone Reg 6300.2.6 and Grading Ordinance 8602.1. The change to the fence height and addition of fill dirt violate Condition #1 of 11/14/05 County Decision Letter which requires changes be reviewed for compatibility with Design Review Standards - there is no evidence of design review.
